

Windows to the Universe

http://www.windows2universe.org/the_universe/Constellations/north_constellations.html

This site, from the National Earth Science Teacher's Association, has a wealth of information about the mythology behind constellations. It also includes information such as when the constellation is visible and important features of constellations such as stars, clusters of stars, nebulas, and galaxies.

Star Date

<https://stardate.org/nightsky/constellations>

This site has interesting facts about multiple constellations. Students will be able to find the color and size of stars in some of the constellations they choose to research as well as information about their mythology.

Skywise Unlimited

http://www.wvu.edu/skywise/a101_constellations.html

At this site it's possible to click on the name of a constellation and see what it looks like on a star chart.
